Gentlemen:

On the night of September 5, 1964, my wife, a neighbor and I were sitting in the front yard looking at the different constellations in the sky when we sighted a fast moving, shining object. We knew this wasn't a satellite or a shooting star as we have seen these previously. As the night went on we noticed more objects - a total of ten in about two hours. The approximate times and descriptions of these objects are listed below:

8:45 p.m.	A fast moving shining (or glowing) object came out of the S-SW and proceeded NE. It didn't have a distinct shape.
8:50 p.m.	A fast moving shining (or glowing) object came out of the NE and proceeded S. This was circular in shape.
9:00 p.m.	A group of four objects different from the above two came from the NE and proceeded S. They flew in formation: 
	They glowed and gave off a white light. They didn't have a distinct shape but were somewhat elliptical.
9:43 p.m.	A small object much further up in the sky than the others came from the NE and went W and then turned S.
9:45 p.m.	What appeared to be the same object came from the S turned to the E and then proceeded to the N.
9:46 p.m.	A circular object came out the S and went N. This was a shiny circular object.
10:25 p.m.	What appeared to be the same object again came from the N and went S.

The reason we did not write sooner was because we didn't think anyone would believe our story. We looked through several newspapers for the next few days for any reports of sightings similar to what we had seen. There were none until Friday last,

when we saw the article in the Newark Star Ledger about the "UFO mystery" in Glassboro, New Jersey. The hole in the ground was found the same weekend we saw the above mentioned objects. We sighted these objects in Long Branch and if one draws a straight line from Long Branch to Glassboro, McGuire Air Force Base and Ft. Dix are directly in the middle. Therefore, we thought we should report this information to you.

Sincerely yours,

[REDACTED]
